Batches will be set in the admin console. The dates that cheese will be smoked (batch dates) will be the only dates a user can choose. When a user selects a date, it will update the Remaining text box for that flavor. In the future, hovering over a given date will show the remaining for all flavors.

 Batch 1
10/21/12  Order
Remaining: 10 3 

 Batch 2
11/28/12  Order
Remaining: 12 1 

 Batch 1
10/21/12  Order
Remaining: 8 5 

 Batch 3
12/07/12  Order
Remaining: 20 0 

Cheese remaining in that batch

Place Order

Users need visibility into how many of each flavor is available for each batch. Should this display be different? Display all batches for each flavor, or use the date picker to see what dates are available?

Transparent box so the background shows through to some percentage, but this is where user interaction takes place. Not shown on other mockups.

Background images will rotate

Admin will add to cheese to individual batches. Later iterations will have a way to subtract and move between batches. The "Needed" text box will display the sum of the added items.

Clicking "+ NEW ITEM" button will launch a modal where new information can be entered and picture loaded. The new item's model should inherit the ability to be added to batches if it is a batch order item (a new flavor of cheese, for example). If not, then it's always available (but page variant/item isn't shown yet).
